THE GALLAGHER PROMISE

An equine electric fence acts as a psychological barrier and is therefore safer than a traditional non-electrified fence. Horses remember the short, sharp but safe shock and develop respect for the fence. Since the purchase of a horse represents a considerable economic and emotional event, the primary consideration for Gallagher is to recommend and design horse safe fencing.

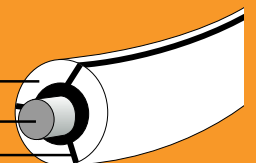

Gallagher EquiFence advantages:

- Increase horse safety reducing expensive veterinary bills
- Stop your horse wind sucking wooden railing
- Use to separate aggressive horses reducing harmful fighting
- Increases the visibility of existing fencing minimizing accidents
- Eliminate injuries which can occur from rusty barb wire

The First Conductive Sighter

A long lasting sighter 10 years guarantee. Gallagher EquiFence features a large diameter wire for high conductivity, and smooth polymer coating increasing visibility. The polymer rolls on the wire reducing snags the horses can get caught on. If you are looking for the best choose EquiFence. EquiFence is featured in the above photograph.
